If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Gerald Hespos during a telephone interview on February 11, 2009.

The application has been amended as follows:

Replace Claim 7 with the following:

-- 7. (currently amended) A structure monitor system for analyzinng a physical quantity at a specified point of a structure, in which the physical quantity at one point on a boundary or inside of the structure is expressed by a governing equation, by a numerical analysis method by setting a specific boundary condition, and monitoring the structure based on the analysis result, comprising:

a measuring means for, using an optical fiber sensor laid at least either on the boundary of the structure or inside the structure, measuring the physical quantity of the structure at points on a part where the optical fiber sensor is laid, wherein the measuring means measures a distortion as the physical quantity a plurality of times at least for the specified point,

Art Unit: 2863

a numerically analyzing means for deriving physical quantities at points on the boundary of the structure where the optical fiber sensor is not laid, the physical quantities are converted for input as the boundary condition, from the governing equation using the measured physical quantities by the measuring means, and calculating an analyzed physical quantity, at a specified point of the structure by the numerical analysis method using at least either the derived physical quantities or the measured physical quantities on the boundary as the boundary condition, wherein the numerically analyzing means calculates the analyzed physical quantity using a boundary element method as the numerical analysis method and recognizes that a crack has been created in the structure when the measured distortion by the measuring means exceeds a specified permissible range; calculates an assumed distortion at a specified reference point of the structure by the boundary element method assuming the position and shape of the crack; and comparing the assumed distortion and a measured distortion at the reference point and executing calculation according to an optimization method to identify the position and shape of the crack, and

a display means for displaying information on the analyzed physical quantity by the numerically analyzing means in relation to the position of the structure. –

Replace Claim 8 with the following:

-- 8. (currently amended) A structure monitor system for analyzing a physical quantity at a specified point of a structure, in which the physical quantity at one point on a boundary or inside of the structure is expressed by a governing equation, by a

Art Unit: 2863

numerical analysis method by setting a specific boundary condition, and monitoring the structure based on the analysis result, comprising:

a measuring means for, using an optical fiber sensor laid at least either on the boundary of the structure or inside the structure, measuring the physical quantity of the structure at points on a part where the optical fiber sensor is laid, wherein the measuring means measures a temperature as the physical quantity a plurality of times at least for the specified point,

a numerically analyzing means for deriving physical quantities at points on the boundary of the structure where the optical fiber sensor is not laid, the quantities are converted for input as the boundary condition, from the governing equation using the measured physical quantities by the measuring means, and calculating an analyzed physical quantity at a specified point of the structure by the numerical analysis method using at least either the derived physical quantities or the measured physical quantities on the boundary as the boundary condition, wherein the numerically analyzing means calculates the analyzed physical quantity using a boundary element method as the numerical analysis method and recognizes that an abnormally high temperature part has been produced in the structure when the measured temperature by the measuring means exceeds a specified permissible range; calculates an assumed temperature at a specified reference point of the structure by the boundary element method assuming the position and shape of the abnormally high temperature part; and comparing the assumed temperature and a measured temperature at the reference point and

Art Unit: 2863

executing calculation according to an optimization method to identify the position and shape of the abnormally high temperature part, and

a display means for displaying information on the analyzed physical by the numerically analyzing means in relation to the position of the structure. --

### ***Reasons For Allowance***

Please see Applicant's remarks and prior Office Action for the indicated reasons for allowance.

Kinugasa et al. (US 2004/0246489) discloses a physical quantity measuring method and device (Fig. 1) comprising a numerically analyzing means (arithmetic apparatus 10). However, the numerically analyzing means (arithmetic apparatus 10) does not receive inputted data to make a modeling, and remake a new modeling based on a result of the calculation of the physical quantity.
